

IPG Automotive Meets Highest Standards of Quality

The Karlsruhe-based company is ISO 9001:2015 certified

Last year, the software and hardware manufacturer for the automotive OEM and supplier industries, IPG Automotive, initiated an evaluation of the company's processes and passed a quality management audit. The technical service provider TÜV Rheinland has attested the compliance with the standards of quality and awarded the ISO certification 9001:2015.

Karlsruhe, March 7, 2017 – IPG Automotive systematically revises its processes. Quality is monitored consistently across the board – whether in development, product management, sales or the manufacturing of turnkey test systems for clients. This has been attested by TÜV Rheinland. With this certification, the solution provider commits itself to a continuous improvement process and gives permanent priority to customer satisfaction.

“We are proud to receive the ISO certification. It attests to our quality standards and our quality-focused company culture,” said managing director Steffen Schmidt. “We understand this certification as a well-deserved recognition of our long-standing methods. It reflects great credit on the everyday work of our entire team,” Schmidt continued.

The quality management standard ISO 9001:2015 is the most prevalent standard in the field of quality management. It defines requirements for a company's quality management system which the company needs to satisfy in order to verifiably meet customer requirements. Companies may verify this compliance by passing a certification process performed by an independent certification body. The validity of the issued certificate is limited; the certificate can be renewed periodically.

IPG Automotive receives the ISO 9001:2015 certification for high standards of quality.

About IPG Automotive GmbH

As an innovation driver for virtual test driving, the company is a leading global provider of software and hardware products for the automotive and supplier industry. With the areas Simulation Software, Real-time Hardware, Test Systems and Engineering Services, IPG Automotive supports its customers in creating innovations and shaping their development process efficiently.

The innovative solutions CarMaker, TruckMaker, and MotorcycleMaker, as open integration and test platforms, facilitate great savings in time and cost for customers, in a continuous development process of Model-, Software- and Hardware-in-the-Loop, all the way to the Vehicle-in-the-Loop method. The application ranges from the vehicle dynamics simulation, developing and testing of chassis control systems, to interconnected systems such as chassis, powertrain and steering to analyses with regard to e-mobility and hybrid technologies. IPG Automotive is also a leading provider of pioneering solutions for the integration and testing of advanced driver assistance systems.
